Kotoor AI Product Marketing Intelligence Framework (Qualitative Analysis)

Overview

The purpose of this framework is to emulate the strategic thinking performed by product marketers, merchandisers, brand strategists, and copywriters **before** any content is generated.

Unlike traditional AI copywriting systems that immediately rewrite product descriptions, Kotoor first builds an understanding of the product, market, customer, and messaging strategy. Each layer has a single responsibility and produces structured outputs that become inputs for downstream layers.

Layer 1 — Product Intelligence Engine

Purpose

Understand **what** the product is.

This layer converts raw product data into structured business knowledge that downstream modules can reason about.

Key Tasks

- Identify category and subcategory
- Identify product type
- Extract materials, specifications, and features
- Determine price segment
- Infer likely target customer
- Identify unique selling points
- Detect missing or inconsistent product information

Sample LLM Prompt

> Analyze the product information and produce a structured product profile without generating marketing copy.

Required Inputs

Merchant Data

- Product title
- Product description

- Images
- Variants
- Price
- Vendor
- Collections
- Tags
- Metafields
- Specifications

External Knowledge

- Product taxonomy
- Industry terminology
- Material knowledge
- Category standards

Expected Outputs

- Product Profile
- Product Classification
- Feature Summary
- Target Customer (Estimated)
- Market Position
- Unique Selling Points
- Structured Product Attributes

Layer 2 — Market Intelligence Engine

Purpose

Understand **where the product fits in the market**.

This layer enriches the merchant's product with external market knowledge. It identifies common positioning patterns without copying competitors.

Key Tasks

- Identify competing product category
- Analyze common industry messaging
- Detect recurring customer expectations
- Identify typical value propositions
- Identify category trends
- Identify common trust signals
- Detect emerging market themes

Sample LLM Prompt

> Analyze the product category using current market knowledge and summarize common positioning strategies, customer expectations, and messaging trends.

Required Inputs

From Product Intelligence

- Product profile
- Category
- Materials
- Price segment

External Knowledge

- Industry trends
- Competitor positioning
- Search intent
- Consumer behavior
- Product marketing knowledge
- Brand positioning examples

Expected Outputs

- Market Position Summary
- Category Insights
- Industry Messaging Patterns
- Customer Expectations
- Competitive Themes
- Trust Signals
- Market Opportunities

Layer 3 — Messaging Strategy Engine

Purpose

Decide **how the product should be marketed**.

Instead of writing copy immediately, this layer selects the most appropriate persuasion strategy.

Key Tasks

- Select messaging framework
- Identify purchase intent

- Estimate customer awareness level
- Determine primary decision driver
- Select trust strategy
- Prioritize product benefits

Sample LLM Prompt

> Based on the product profile and market analysis, determine the optimal messaging strategy for maximizing customer engagement and conversion.

Required Inputs

From Product Intelligence

- Product profile
- Product positioning
- Target customer

From Market Intelligence

- Market positioning
- Customer expectations
- Industry messaging patterns
- Trust indicators

Expected Outputs

- Messaging Framework
- Purchase Intent
- Customer Awareness Level
- Decision Drivers
- Trust Strategy
- Benefit Hierarchy
- Messaging Priorities

Layer 4 — Emotional Positioning Engine

Purpose

Determine **how the customer should feel** after interacting with the product page.

This layer establishes the emotional direction that will remain consistent throughout the generated content.

Key Tasks

- Identify primary emotional appeal
- Select supporting emotions
- Define customer transformation
- Determine emotional outcome
- Recommend emotional vocabulary
- Identify emotions to avoid

Sample LLM Prompt

> Determine the emotional positioning that best aligns with the product, target audience, and market expectations.

Required Inputs

From Product Intelligence

- Product profile
- Customer profile

From Market Intelligence

- Industry positioning
- Customer motivations

From Messaging Strategy

- Messaging framework
- Purchase intent
- Decision drivers

Expected Outputs

- Primary Emotion
- Secondary Emotion
- Desired Customer Feeling
- Emotional Transformation
- Emotional Vocabulary
- Emotional Positioning Summary

Layer 5 — Brand Voice Engine

Purpose

Decide **how the brand should sound** while delivering the chosen message.

This ensures generated content remains consistent with the merchant's identity instead of producing generic AI writing.

Key Tasks

- Detect existing brand voice
- Recommend tone
- Define writing style
- Select vocabulary level
- Establish readability
- Maintain consistency across generated assets

Sample LLM Prompt

> Generate a brand voice profile that matches the product, audience, emotional positioning, and existing brand identity.

Required Inputs

Merchant Data

- Existing website content
- Product descriptions
- Brand About page
- Marketing copy

From Previous Layers

- Messaging strategy
- Emotional positioning
- Product profile

Expected Outputs

- Brand Personality
- Tone of Voice
- Writing Style
- Vocabulary Guidelines
- Sentence Style
- Brand Voice Profile

Layer 6 — Copy Generation Engine

Purpose

Generate customer-facing content using the strategic decisions produced by all previous layers.

At this point, the AI is no longer making marketing decisions—it is executing an already-defined strategy.

Key Tasks

- Generate optimized product title
- Generate product description
- Create feature and benefit sections
- Generate CTA
- Generate FAQ content
- Generate marketing snippets

Sample LLM Prompt

> Generate conversion-focused product copy using the provided product profile, messaging strategy, emotional positioning, and brand voice. Do not alter the predefined strategy.

Required Inputs

- Product Profile
- Market Insights
- Messaging Strategy
- Emotional Positioning
- Brand Voice
- Merchant Product Data

Expected Outputs

- Product Title
- Product Description
- Feature Highlights
- Benefit Sections
- Call-to-Action
- Marketing Copy
- PDP Content

Layer 7 — SEO & Discovery Engine

Purpose

Optimize generated content for search engines and product discovery without changing the established messaging strategy.

Key Tasks

- Generate SEO title

- Generate meta description
- Recommend keywords
- Generate tags
- Generate structured metadata
- Create metafields
- Improve discoverability

Sample LLM Prompt

> Optimize the finalized product content for search visibility while preserving the messaging strategy and brand voice.

Required Inputs

- Final Product Copy
- Product Attributes
- Category
- Search Intent
- SEO Best Practices

Expected Outputs

- SEO Title
- Meta Description
- Keywords
- Product Tags
- Structured Metadata
- Shopify Metafields

Design Principle

Every layer has **one responsibility** and produces structured outputs consumed by the next layer. This modular architecture makes the system explainable, extensible, and easier to validate than a single monolithic prompt.

While companies may use different terminology (e.g., Product Marketing, Brand Strategy, Messaging Framework, Merchandising, or CRO) and distribute these responsibilities across different teams, the underlying sequence—**understand the product, understand the market, define the messaging, establish emotional positioning, apply a consistent brand voice, then generate content**—is consistent with modern product marketing and messaging practices.
